

BYZBIT is a utility an ERC-20 Token used in the BYZBIT economy to pay for goods and settle merchants.

Our Mission

With the volume of unutilized capacity and resources in the growing agricultural industry of Ethiopia chiefly in rice production and the inadequate exploitation of natural power generation in improving processes at a low cost rate, BYZBIT has considering the environmental impact of agricultural waste and fossil fuel usage adopted a unique innovative approach by exploiting technology and unique processes and agricultural waste in the production of quality papers for everyday usage.

Market

Across the entire Ethiopia where it has nine (9) big regions and two (2) States, the paper business is to be considered as one of the most important businesses since more than half of One hundred seven millions (107 Million) of people needs this thing in their daily transactions from the Industry to the Academic Institutions of both Government and Non-Government Establishment. Aside from Ethiopia, papers are very much needed also on its neighboring countries like Djibouti, Kenya, North and South Sudan, Eretria, and Somalia where the price of the paper per ream reaches \$7.5 up to \$10.

Since there is only one paper mill industry in Ethiopia and it is focus only in producing tissue paper and newsprint paper, Our Agritech Green Paper Mill Manufacturing and Trading P.L.C. have no competitor in this Industry. Another big advantages of the Agritech Green is that 100% of its raw materials are hugely available in local market which means it does not require expenses for the importation of raw materials. It is environmental friendly project which get a six (6) years free of profit tax from Ethiopian government as an incentive.

Byzbit token will be the only utility token to be accepted to used between the Agritech Green Paper Mill Manufacturing and Trading P.L.C. and on it's paper distributors where they can get several perks when they use byzbit to purchase papers from the Agritech Green Paper Mill Factory, perks like attractive discounts compared to fiat payment, free delivery from the factory to their warehouse and many others.

What We Do

BYZBIT is a tokenized Paper Mill Factory exploiting unutilized capacity in the form of agricultural waste and other materials in the production of Paper Rolls. As a tokenized Paper Factory, BYZBIT uses a blockchain based token to represent quantifiable values (products - Jumbo Rolls) which are created in the process of production and transferable using the BYZBIT token. As a tokenized Paper Mill Factory producing business which uses cryptographic tokens to represent production unit and same units can be exchanged using the token. It uses smart renewable energy in its production processes.

How It Works

BYZBIT employs innovative solutions in the production of Jumbo size paper rolls. This it does by utilizing agricultural waste from rice and other materials such as rice straw, teff straw etc as primary materials of production in producing. The paper mill production process is initiated using Smart Renewable thus reducing carbon initiation to the environment via fossil fuels.

The BYZBIT entire enterprise utilizes blockchain technology via the BYT, an ERC-20 token as the currency for economic exchange of values across the various value chains in the production processes and sales including but not limited to internal reward/remuneration system. This application ensures the creation of a value added business economy with increasing capacity for efficiency and the reduction of environmental pollutants.

Token

The BYT Token powers the economy of the BYZBIT Economy with a total supply of 10 billion BYT Tokens. It is allocated as follows

- Coin name : Byzbit (BYT)
- Ticker : BYT
- Decimals : 18
- Platform : Ethereum
- Total Supply : 100M
- Distribution : Airdrop, Bounty, IEO, Private Sale

Use of Proceeds

The Proceeds from the sale of BYZBIT token will be made in the following percentages:

- 40% Development of the BYZBIT Enterprise.
- 20% Exchange services.
- 15% Reserve for future needs.
- 10% Legal team.
- 10% Marketing activities.
- 5% Miscellaneous activities.

Conclusion

Agricultural waste abounds in various countries and in the various production outputs of farms. The agro-allied enterprises also produce their own waste. In a world of global concern over carbon emission, fossil fuels is still be used in Africa countries very much and as such, Africa contributes immensely to global warming. In view of this, BYZBIT aims at utilizing these underutilized capacities in the form of agricultural waste by leveraging smart renewable energy in its production processes to produce Jumbo Size Paper Rolls which can be utilized by other firms. In view of this and to facilitate a low cost yet fast economic exchange, it has adopted the blockchain technology to speed up exchange of values using the BYT Token.
